

BEG **CleanBuddy 4.0**

The washing robot. Clean performance

Quick and easy relief for stable wash

The CleanBuddy 4.0 does the dirty work for you.

It cleans your stables fully automatically and relieves you of up to 90% of unpleasant work. You gain time and save costs.

We are happy to demonstrate the washing robot, contact us!

The easy way to clean stables!

BEG CleanBuddy 4.0 is the washing robot for automated pigsty cleaning.

Avoid time-consuming stable washing that lasts for hours. Have time for other things!

During development, we have placed particular emphasize on the robot being practical, intuitive to operate and robust.

BEG CleanBuddy 4.0 is

- pushed into the pen,
- connected to a high-pressure cleaner,
- and then set to which wall height the robot should clean.

Start the robot afterwards.

How does the cleaning process work?

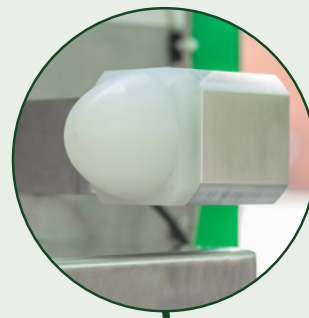

BEG CleanBuddy automatically measures the depth of the pen. The robot uses the generated information to adjust the telescopic arm, travel speed and the high-pressure nozzle. Radar sensors detect obstacles such as feed drains, supports or water pipes, which the arm with the nozzle automatically avoids. The wash arm moves in various positions inside the pen during washing. In this way, the pen is cleaned from several sides.

After cleaning, you will receive an SMS about the completion.

Your benefits: You save valuable time and follow-up cleaning is much more pleasant without heavy dirt flying through the air.

The swiveling head rotates to different positions during washing (e.g. floor wash 15°, wall wash, more directed to the stabling 40°.) In case of obstacles and at the end of the pen, the head swivels automatically so that all parts of the pen are cleaned.

Sensors automatically measure the pen's width/depth and detect obstacles such as feed lines or similar.

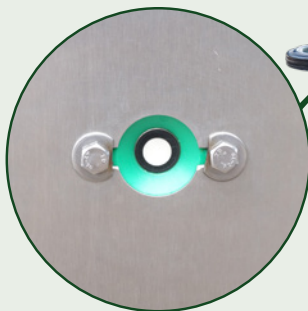

Removable battery for continuous operation.

The nozzle works with a strong point jet to remove even distant dirt particles effectively. The rotating speed of the nozzle adjusts automatically depending on the pen depth and arm length.

- The display is simple and intuitive to use.
- The timer program allows delayed starts, e.g. in 5 hours.
- In „soaking mode“, the robot can move swiftly through the pen widely applying atomized spray to wet pen parts.

Sensors at the front and rear independently detect the end of the pen.

Details:

- **Thorough cleaning** of pens up to 7 m deep - telescopic washing arm moves in several stages up to 270 cm into the pen
- **Cleaning without interruption** - hose reel for up to 80 m hose, long sections are washed in one process.
- **Obstacles are sidestepped** - feed lines, manholes
- **Intuitive display** - apart from the desired washing height, no further settings are necessary.
- **Battery replaceable** for continuous operation in several sections
- **Battery life** approx. 8 hours.
- **Soaking program** as additional function.
- **Timer program** - adjustable start time.
- **Robust and puncture-proof** - with heavy-duty solid rubber wheels.
- **Longest service life** - thanks to stainless steel chassis.
- **Narrow aisles? - No problem!** - Only 55 cm wide, the robot fits into almost any stable.
- Dimensions: 55 x 138 x 174 cm (W x L x H)
- Weight: 350 kg

Are you a practitioner? So are we!

We know the challenge of being a farmer. The Schulze Bremer family operates its own sow and pig fattening farm. Therefore, we are committed to ensuring that our products are suitable for practical use.

We only select products that

- pass practical tests in the stable,
- are of good quality,
- offer a fair price-performance ratio.

#WeAreFarmers

Our BEG team consists for the most part of trained farmers or members that have many years of experience in the field of agriculture and pig farming. They know their job not only theoretically, but also from their own practical experience. Hence, they can always give sound advice.

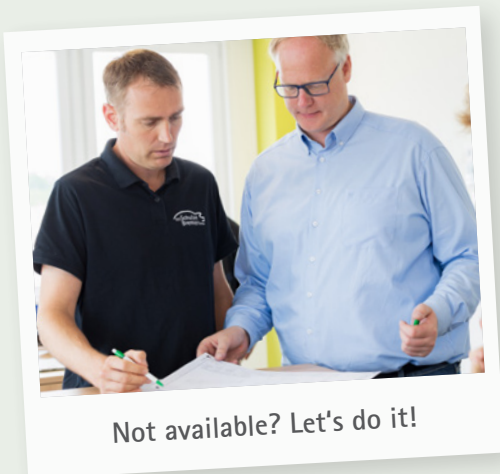

Not available? Let's do it!

We are interested in solutions that improve work in stables. If the manufacturer market does not offer a solution, we develop and test one. Just like the CleanBuddy 4.0. We realized that already available devices need to be more practical.

Thus, we have developed our own washing robot. You do not have to modify stables or train employees extensively.

Already in the past we developed alternatives and products to meet our demands with respect to quality and fair price.

Delivered at lightning speed

You need your goods quickly! All orders received by 1 p.m. will be shipped as usual and of course on the same day.

Our warehouse, newly built in 2019, offers sufficient capacity for high inventory levels. Thus, we are usually able to ship your order immediately.
